

CREATE

CREATE - INNOVATIVE OPERATIONS AND CLIMATE AND WEATHER MODELS
TO IMPROVE ATM RESILIENCE AND REDUCE IMPACT

- Prof. Angelo Riccio
- University of Naples, Parthenope
- Project Manager

September 13rd 2022

Partnership

1. UNIPARTH, Università degli Studi Napoli «Parthenope»

2. ARIANET srl

3. CIRA - Italian Aerospace Research Center

4. FMI - Finnish Meteorological Institute

5. ISSNOVA, Institute for Sustainable Society and Innovation

6. NLR - Netherlands Aerospace Center

7. UPC - Universitat Politècnica de Catalunya

FINNISH METEOROLOGICAL INSTITUTE

WHAT

CREATE is a project aligned with the research topic “Environment & Meteorology for ATM”, which is part of the research area “ATM Excellent Science & Outreach” of the SESAR 2020 Exploratory Research programme (call H2020-SESAR-2019-2).

Integrate new meteorological and air quality products into ATM

- CREATE explores the capabilities of high-resolution CTMs (Chemical-Transport Models) for air quality assessment studies to test the advantages in terms of environmental impact in TMAs (Terminal Manoeuvring Areas), and on the regional and global scales to study the impact of aviation emissions onto the global chemistry.
- CREATE explores the capabilities of CTMs for air quality assessment studies.
- CREATE explores the capabilities of short-range, high-resolution weather prediction models

WHAT

CREATE is a project aligned with the research topic “Environment & Meteorology for ATM”, which is part of the research area “ATM Excellent Science & Outreach” of the SESAR 2020 Exploratory Research programme (call H2020-SESAR-2019-2).

Investigate operational changes to ATM aiming at reducing the environmental impact from aviation

- CREATE proposes new ATM concepts, taking advantage of curved approach/depart RNP procedures and advanced 4D trajectory optimisation and replanning algorithms
- The 4D trajectory optimisation and replanning concept proposed in CREATE is designed as a 4D multi-aircraft optimisation framework

The environmental impact of flight operations is studied for both en-route and TMA phases

WHAT

CREATE is a project aligned with the research topic “Environment & Meteorology for ATM”, which is part of the research area “ATM Excellent Science & Outreach” of the SESAR 2020 Exploratory Research programme (call H2020-SESAR-2019-2).

Enhance ATM efficiency

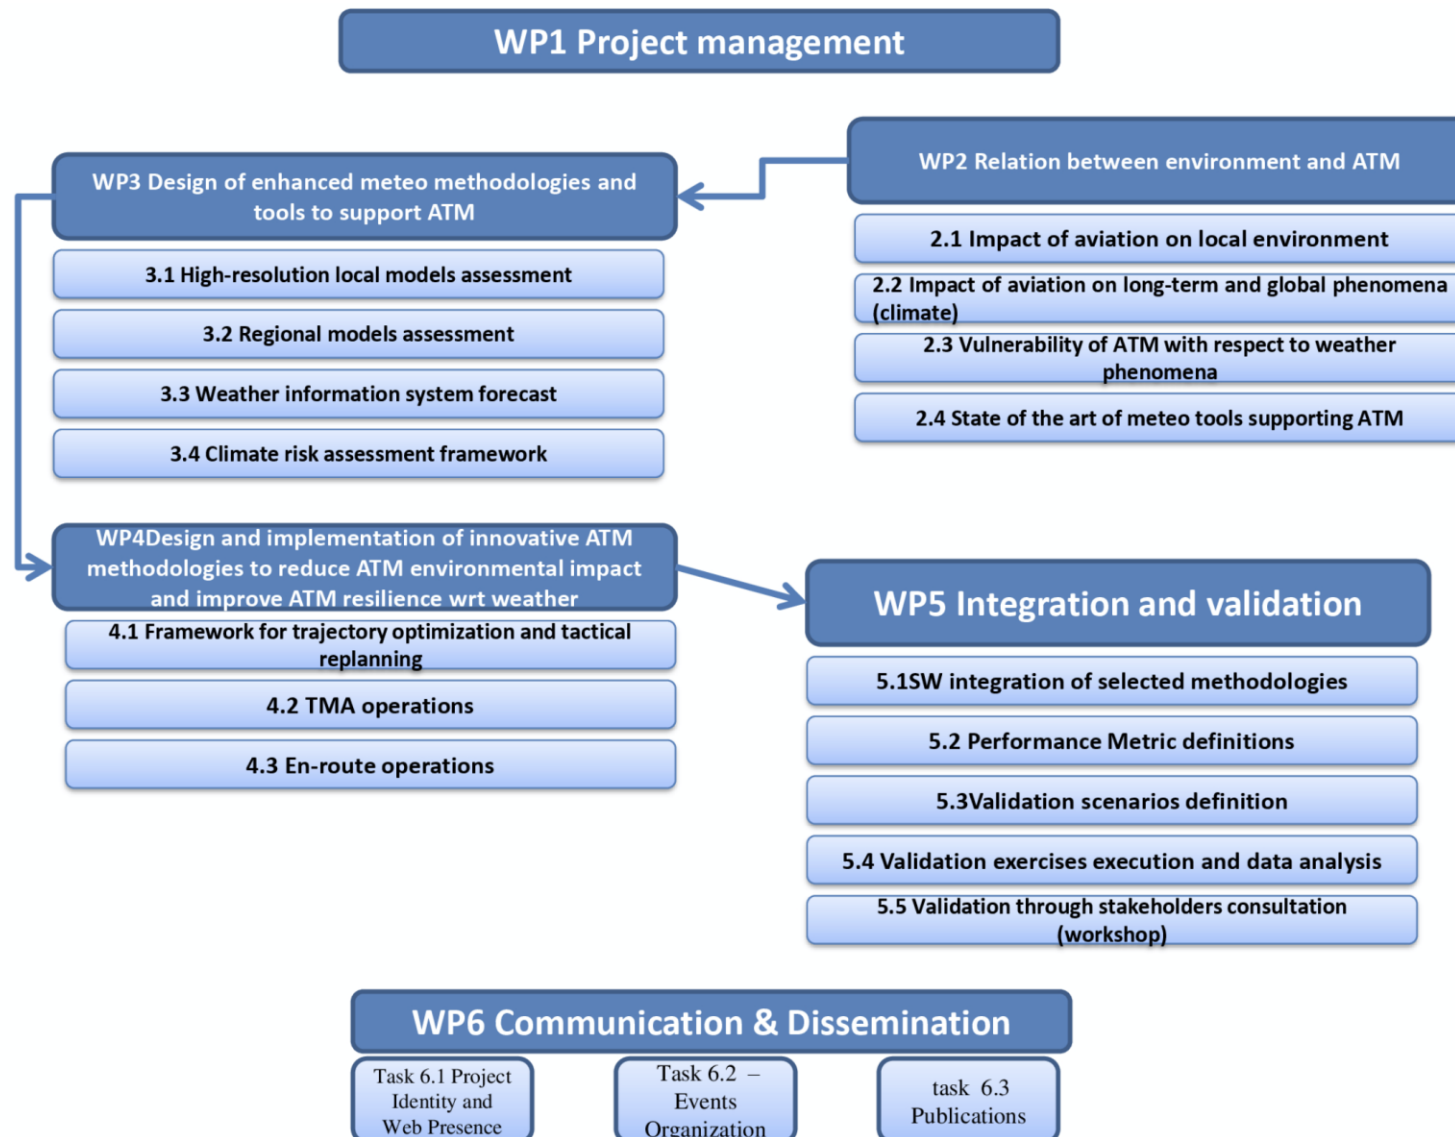

- CREATE analyses ATM vulnerabilities with respect to weather, by considering both en-route and TMA phases and the different meteorological phenomenon (heavy winds, thunderstorms, rain, low visibility conditions) and severity levels
- CREATE integrates meteorological information for the improvement of the resilience of the ATM system to local weather and global and/or long-term phenomena

A better management of consequential delays is expected

CREATE proposes three solutions

- CREATE-SOL-1: Multi-scale multi-pollutant air quality system (WAQS)
 - This solution enables the evaluation of the impact that the air traffic regulation policy options can have on the environment and climate, estimating the extent of the environmental impacts that current and future air traffic movements might have
- CREATE-SOL-2: Multi-aircraft environmentally-scored weather-resilient optimized 4D-trajectories
 - This solution aims to support the update and revision process of the reference business trajectory (RBT) in highly disrupted scenarios due to weather hazards or climate-sensitive zones, tackling (near) real-time aspects and the network and safety constraints arising in a multi-aircraft environment
- CREATE-SOL-3: CO₂ and non-CO₂ balanced Environmental Scores Module
 - The solution points to the “greenness” of aircraft trajectories related to flight and ATC sector environmental performance. Candidate trajectories are evaluated with respect to CO₂, NO_x and contrail probability formation

Id	Title	WPL's Institution
WP1	Project Management	UNIPARTH
WP2	Relation between environment and ATM	CIRA
WP3	Design of enhanced meteo methodologies and tools to support ATM	UNIPARTH
WP4	Design and implementation of innovative ATM methodologies to reduce ATM environmental impact and improve ATM resilience wrt weather	UPC
WP5	Integration and Validation	UNIPARTH
WP6	Communication and Dissemination	UNIPARTH

Technical deliverables

WP	Deliverables	Lead Beneficiary	Date of first submission/ final acceptance
WP2	D2.1 Aviation impact on local environment term and global phenomena	ARIANET	April 9, 2021/ July 14, 2021
	D2.2 Analysis of vulnerability of ATM to weather phenomena	CIRA	May 15, 2021/ July 26, 2021
WP3	D3.1 Local and regional models integrated with weather and climate information	UNIPARTH	July 9, 2021/ October 25, 2021

Technical deliverables

JOINT UNDERTAKING

WP	Deliverables	Lead Beneficiary	Date of first submission/ final acceptance
WP4	D4.1 Integrated methodology for ATM procedure design reducing TMA and en-route operations impacts	UPC	September 27, 2021/ October 28, 2021
WP5	D5.1 Software design for validation scenarios execution	UNIPARTH	April 21, 2022/ May 20, 2022
	D5.2 Procedures validation identifying potential benefits and risks and stakeholder's implementation suggestions	UNIPARTH	August 5, 2022/ ----
	D5.3 Final Project Results	UNIPARTH	September 5, 2021/ ----

#	Title	Date of achievement
MS1	Kick-off meeting	July 1, 2020
MS2	Methodologies supporting ATM ready for design	July 26, 2021
MS3	CREATE ATM procedure ready for implementation	October 9, 2021
MS4	Intermediate CREATE results	October 9, 2021
MS5	AB recommendations	March 7, 2022
MS6	Stakeholders workshop	July 19, 2022
MS7	CREATE final project results	September 3, 2022
